WESTERNEX

PVC Splits

PVC Splits

Westernex PVC splits are used to keep core samples in one piece and prevent the contamination or loss of samples. They are ideal for samples that are broken or wet and can be extracted directly onto splits from the drill tube and, subsequently, into core trays. These PVC splits are made in our own facility and so custom sizes can be requested.

Layflat Tube

Westernex layflat tube is used to protect your core from the natural elements that occur once stored. When nitrogen replaces oxygen, it stops oxidation (especially for high sulfide core). Our layflat tube is made in house, which allows us flexibility to make any custom size you may require.
